TO WHOM IT MAY CONCERN

I am writing this reference letter in my capacity of Professor of Digital Business and Workplace Technology at Luiss University, where I met Janhvi Goje in the second semester of the A.Y. 2023/24. The course is part of the Bachelor in Management and Computer Science at Luiss, a program that combines quantitative skills in data science with the rigorous thinking of economics and management. It blends traditional courses in economics, entrepreneurship, law and statistics with a significant presence of STEM topics, and training students on algorithms, coding, artificial intelligence, data management. The course in Digital Business and Workplace Technology aims at providing students with an architectural view of enterprises linking business strategies to processes, applications and Information Technology. It also requires students to work in group on a process mining project in which they create a dashboard using Celonis.

In the course, Janhvi has shown to be open minded and highly motivated, with a passion for management applications of data science. Janhvi's qualities have emerged in both the group work and the individual assessment. The final mark 30/30 reflects her dedication to the course activities and positions her in the top 5% of performers. One of the candidate's strengths is the capacity of working in team maintaining a good communication with and between members. In fact, Janhvi's team has demonstrated a great level of collaboration and problem solving.

Overall, Janhvi has demonstrated her passion in the field of information systems together with a positive and collaborative approach with her classmates and colleagues.

Should you wish further information from me, please do not hesitate to contact me.

Yours sincerely
